SUMMARY

Software engineer with experience building full-stack applications, data systems, and real-time tools in fast-paced environments. Skilled across Python, JavaScript, and modern web technologies, with a focus on developing scalable, user-driven solutions. Particularly interested in applying software to impactful, real-world problems, including sustainability and environmental systems.

TECHNICAL SKILLS

Languages: Python, Javascript, Typescript, SQL, HTML, CSS
Frameworks & Libraries: Flask, React.js, SQLAlchemy, Bcrypt, Material-UI, Bootstrap, Marshmallow, Formik, Yup
Tools: AWS (Elastic Beanstalk, RDS, SES, S3, IAM), Git, Google OAuth, Google Maps API, Postman, Coda, Domo
Other Skills: Object-Oriented Programming, Elementary R/RStudio, Microsoft Office (Excel, PowerPoint, Word)

PROFESSIONAL EXPERIENCE

Junior Software Developer, **Everlight Solar,** Remote (08/2024 - Present)

- Designed and built a weather monitoring and alerting system that tracks significant weather events across geographic regions, enabling real-time visibility into environmental conditions. Implemented dynamic alerting based on user-defined event types and geospatial coordinates, delivering targeted notifications via Slack to improve response time and operational awareness
- Led development of a Commission Tracking App (Python, SQL, JavaScript, Coda, Domo) used by 50–100+ users, automating complex workflows and improving transparency across solar sales operations
- Built ETL pipelines and SQL transformations processing millions of records weekly to support real-time dashboards and business decision making
- Developed cross-system integrations (Coda, Domo, Salesforce, Jira) to centralize data and reduce manual workflows
- Contributed to a React-based portal and migration from JavaScript to TypeScript to improve maintainability and scalability

Full Stack Software Engineer (Contract), **Ama Earth Group,** Remote (03/2024 - 08/2024)

- Led software development for a climate tech platform that funds & executes land regeneration projects, integrating Stripe payments and Google OAuth 2.0. Successfully overhauled the backend system, migrating from Google Firebase to a Flask backend hosted on AWS, enhancing scalability and performance.

Technology Investment Banking Analyst, **Oppenheimer & Co.,** San Francisco, CA (07/2022 - 05/2023)

- Conducted financial modeling, market research, and due diligence to support M&A, IPO, and private placement transactions with an aggregate deal value of $1B+ in the technology sector.

TECHNICAL PROJECTS

TEA Culture - Github *Full Stack App*

Web application developed to provide a platform for sharing and managing tea recipes

- Built a full-stack application for sharing and managing user-generated content with complete CRUD functionality.
- Implemented authentication using JWT cookies and Google OAuth 2.0.
- Designed RESTful APIs and used Marshmallow for efficient data serialization.

Virtual Planner - Github *Full Stack App*

Web application developed to enhance personal organization and community engagement

- Designed a customizable task management & journaling dashboard with an integrated comprehensive authentication system, allowing users to create accounts, manage profiles, and engage with personalized planners securely.

EDUCATION

Yale University New Haven, CT
BA in Economics | SAT: 1580/1600 | Overall GPA: 3.7/4.0 Graduated 05/2022

Flatiron School Remote
Full Stack Web Development, Python with Flask and JavaScript program 09/2023 - 12/2023
